IN THE CLAIMS

Please replace all claims in the instant application with the listing below as follows:

- 1 1. (Previously Presented) A lifting sling, said lifting sling comprising:  
2  
3 a plurality of core fibers forming a sling body, said sling body is load bearing; and  
4  
5 a coating, said coating is at least an isocyanate mixed with an amine forming  
6 polyurea, said coating is sprayed onto said plurality of core fibers, said coating is  
7 applied in patterns of varying thicknesses and locations along length of said sling  
8 body, initial layer of said coating seals said plurality of core fibers from exposure  
9 to contaminants, additional layers of said coating are applied in areas of said sling  
10 body subject to high crush and shear forces increasing said coating thickness and  
11 shear strength, preventing said plurality of core fibers and said coating damage  
12 during use of said lifting sling, and achieving operational properties that extend  
13 suitability for use of said coating and said plurality of core fibers, a final splatter  
14 layer of said coating is applied along said sling body creating a rugged textured  
15 non-slip grip exterior surface.  
16
- 1 2. (Previously Presented) The lifting sling in accordance with claim 1, wherein said  
2 coating is selected from the group consisting of a polyurea elastomer, or a hybrid  
3 polyurethane – polyurea elastomer.  
4
- 1 3. (Previously Presented) The lifting sling in accordance with claim 1, wherein said  
2 coating has an operational temperature range of -40 to 175 degrees Celsius.

DCARML-010

- 3 -

3

1 4. (Previously Presented) The lifting sling in accordance with claim 1, wherein said  
2 coating has a tensile strength in the range of up to 6,500 pounds per square inch, an  
3 elongation range of up to 300 percent, and a tear resistance in the range of up to 600  
4 pounds per linear inch.

5

1 5. (Previously Presented) The lifting sling in accordance with claim 1, wherein said  
2 coating includes at least one of the following additives:

3

- 4 i) a catalyst;  
5 ii) a stabilizer;  
6 iii) a pigment;  
7 iv) a fire retardant;  
8 v) a static electricity reducing additive;  
9 vi) an ultraviolet filtering additive; or  
10 vii) a thermal cycling additive.

11

1 6. (Previously Presented) The lifting sling in accordance with claim 1, wherein said  
2 plurality of core fibers include at least one of the following:

3

- 4 i) nylon;  
5 ii) polyester;  
6 iii) a synthetic fiber;  
7 iv) polypropylene;  
8 v) wire rope;  
9 vi) steel core;  
10 vii) cordage rope;

DCARML-010

- 4 -

- 11       viii)   yarn;
- 12       ix)     NOMAX;
- 13       x)      KEVLAR; or
- 14       xi)     chain.

15

1    7. (Previously Presented) The lifting sling in accordance with claim 1, wherein said lifting  
2    sling further comprising a safety core, said safety core is bonded by said coating  
3    proximate to said plurality of core fibers causing said safety core, said coating, and said  
4    plurality of core fibers to be subjected to the same operational forces during use of said  
5    lifting sling.

6

1    8. (Previously Presented) The lifting sling in accordance with claim 7, wherein said safety  
2    core traverses said lifting sling.

3

1    9. (Previously Presented) The lifting sling in accordance with claim 7, wherein said safety  
2    core is located, with respect to said plurality of core fibers, in at least one of the following  
3    locations:

4

- 5       i)       seam located;
- 6       ii)      perimeter located; or
- 7       iii)     centrally located.

8

1    10. (Previously Presented) The lifting sling in accordance with claim 7, wherein said  
2    safety core is interconnected with at least one of the following:

3

- 4       i)       an indicator; or
- 5       ii)      an electronic system.

- 5 -

6

1 11-15. (Canceled)

2

1 16. (Previously Presented) The lifting sling in accordance with claim 1, wherein said  
2 lifting sling further comprising at least one of the following:

3

4 i) an indicator secured proximate to said plurality of core fibers; or

5 ii) an electronic system secured proximate to said plurality of core fibers.

6

1 17. (Previously Presented) The lifting sling in accordance with claim 16, wherein said  
2 electronic system further comprising at least one of the following:

3

4 i) a microcontroller;

5 ii) a graphical user interface;

6 iii) a keypad;

7 iv) a touch pad;

8 v) a plurality of general purpose inputs and outputs;

9 vi) a safety core interface;

10 vii) a lifting sling measurement and dynamics interface;

11 viii) an RFID interface;

12 ix) an IRDA interface;

13 x) a transceiver;

14 xi) a wireless data link;

15 xii) a LAN interface;

16 xiii) a WAN interface;

17 xiv) a serial data link;

18 xv) a GPS interface;

DCARML-010

- 6 -

- 19       xvi)   a power supply;  
20       xvii) a flash memory;  
21       xviii) a read only memory;  
22       xix)   a real time clock;  
23       xx)    an EEROM; or  
24       xxi)   a NOVRAM.

25

1   18. (Previously Presented) The lifting sling in accordance with claim 16, wherein said  
2   indicator or said electronic system indicates operational condition of said lifting sling,  
3   suitability for use of said lifting sling, or security status of an article secured by said  
4   lifting sling.

5

1   19-24 (Canceled)

2

1   25. (Previously Presented) A lifting sling, said lifting sling comprising:

2

3       a plurality of core fibers forming a sling body, said sling body is load bearing;

4

5       a coating, said coating is at least an isocyanate mixed with an amine forming  
6       polyurea, said coating is disposed onto said plurality of core fibers, said coating is  
7       applied in patterns of varying thicknesses and locations along length of said sling  
8       body, initial layer of said coating seals said plurality of core fibers from exposure  
9       to contaminants, additional layers of said coating are applied in areas of said sling  
10      body subject to high crush and shear forces increasing said coating thickness and  
11      shear strength, preventing said plurality of core fibers and said coating damage  
12      during use of said lifting sling, and achieving operational properties that extend  
13      suitability for use of said coating and said plurality of core fibers, a final splatter

- 7 -

14 layer of said coating is applied along said sling body creating a rugged textured  
15 non-slip grip exterior surface, said coating thicknesses and locations along length  
16 of said sling body are selected based in part on operating conditions of said lifting  
17 sling; and

18

19 an electronic system secured by said coating proximate to said plurality of core  
20 fibers, wherein by way of said electronic system said lifting sling data  
21 communicates with a plurality of data processing devices or a plurality of global  
22 network based data processing resources.

23

1 26. (Previously Presented) The lifting sling in accordance with claim 25, further  
2 comprising a cover, said cover being fitted around said plurality of core fibers, said cover  
3 is coated with said coating.

4

1 27. (Previously Presented) The lifting sling in accordance with claim 25, further  
2 comprising a cover, said cover being fitted around said plurality of core fibers, said cover  
3 is coated and secured into position with said coating.

4

1 28. (Canceled)

2

1 29. (Previously Presented) A lifting sling, said lifting sling comprising:

2

3 a plurality of core fibers forming a sling body, said sling body is load bearing; and

4

5 a coating, said coating material is at least an isocyanate mixed with an amine  
6 forming polyurea, said coating is disposed onto said plurality of core fibers, said  
7 coating is applied in patterns of varying thicknesses and locations along length of
